

THE GUT VS. DATA FRAMEWORK

A quick checklist for knowing which one to trust

Before you agonise over a decision, run it through these three questions.

01

Have I done this before, many times, with real feedback each time?

Yes -> your intuition has something genuine to draw on. Trust the gut reaction.

Based on naturalistic decision-making research (Gary Klein).

02

Is there real data or expertise I could reasonably consult?

Yes -> slow down and use it. Deliberate analysis wins in unfamiliar territory.

Kahneman's 'System 2' thinking: slow, effortful, analytical.

03

Is this actually about preference, not facts, i.e. what do I want?

Yes -> there's no dataset for this. Notice your gut reaction and trust it.

This is the exact gap a coin-flip reaction is built to reveal.

AT A GLANCE

Familiar + fast feedback

Trust your gut

Unfamiliar, high-stakes, statistical

Gather data & analyse

No right answer, just preference

Use a gut-reaction tool

Still stuck between two options after all that?
That's exactly what the coin is for.
